

## **Kebony - Bush Fire Attack Level (BAL) Rating 12.5 & 19**

### **Cladding**

Kebony Radiata and Scots Pine (E2) can be used for cladding to BAL 12.5/19 throughout the envelope of the building but no lower than 400mm to ground level.

The lower 400mm should be made up of either Kebony with suitable FR treatment, Fire Resistant Timber, Timber Species (E1) or a non combustible material.

### **Decking**

Kebony Radiata and Scots Pine (E2) can be used for decking to BAL 12.5/19 throughout the entire deck but no closer than 300mm to a glazed element.

The lower 400mm should be made up of either Kebony with suitable FR treatment, Fire Resistant Timber, Timber Species (E1) or a non combustible material

N.b Advice should be sort from the appropriately qualified engineer and/or consultant in line with individual state or territory requirements before proceeding with the specification of external timber elements. The above is a reference guide only based on current literature available at the time of publishing.
